    No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.

AC AC This invention relates to a purified glycosylated polypeptide expressed on normal human haematopoietic progenitor cells and on leukaemic blasts, termed haematopoietic cell E-selectin/L-selectin ligand (HCELL). The HCELL protein of the invention is useful for identifying a stem cell, fo isolating a stem cell from a population of cells or for increasing the engraftment potential of a cell population. The protein is useful for treating a haematopoietic disorder such as leukaemia, or inflammatory disorder in a subject. Methods of the invention are useful for treating haematopoietic disorder in a subject or mammal, and treating cancer or a for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        disorder amenable for treatment with a stem cell in a subject or mammal, where the disorder is selected from myocardial infarction, Parkinson's disease, diabetes, congenital muscle dystrophy, stroke, genetic/congenital disorders and liver disorders. Another method disclosed in the invention is useful for increasing levels of engrafted stem cells in a subject, preferably a human suffering from or at risk for haematopoietic disorder or cancer, preferably blood cancer, respectively. The HCELL protein is useful for treating haematopoietic disorders such as aplastic anaemia, and inflammatory disorders such as rheumatoid arthritis, inflammatory bowel disease and asthma. The HCELL protein is useful as an immunogen for producing anti-HCELL antibodies. The present sequence represents the HCELL protein of the invention
                                      Translational profiling; expressed protein tag; EPT; kinase; phosphatase; protease; protease inhibitor; transporter; cytoskeletal protein; receptor; transcription factor; cancer; MHC; major histocompatability complex; myeloma; colon cancer; gastric cancer; adenocarcinoma; sarcoma; melanoma; lymphoma; leukaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 493

얹

The invention describes a purified polypeptide, which comprises a confragment of a kinase, phosphatase, protease, protease inhibitor. The transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a companial an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also composition for class I mfc-binding polypeptide. The polypeptide is also class I or class II mfc-binding polypeptide. The polypeptide and color cancer are particularly useful for treating or preventing class. In mfc-binding polypeptide. The polypeptides and color cancer, gastric cancer, adenocarcinoma, sercoma, melanoma, color cancer, gastric cancer, adenocarcinoma, sercoma, melanoma, color cancer, gastric cancer, adenocarcinoma, sercening agents for treating the above mentioned diseases. This sequence represents an competent protein tag (EPT) isolated from human tissue for translational compositions. Note: This sequence does not appear in the printed composition of the protein content of the polypeptide content and content a

The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The solveptide is also useful for identifying compounds that binds to a naturally processed class I or class I MHC-binding polypeptide. The polypeptides and polymucleotides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Translational profiling; expressed protein tag; EPT; kinase; phosphatase; protease; protease inhibitor; transporter; cytoskeletal protein; receptor; transcription factor; cancer; MMC; major histocompatability complex; myeloma; colon cancer; gastric cancer; adenocarcinoma; sarcoma; melanoma; lymphoma; leukaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                           New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human expressed protein tag

                                                                                                                                                                     The cDNA encoding epithelial CD44 is quite similar to haematopoietic CD44.5 cDNA (see AAQ21185), but encodes an additional extracellular domain of 165 mino acids, inserted about 140 residues upstream of the transmembrane section shared by both clones. The ability to interfere with binding of epithelial CD44 to extracellular matrices can be useful in diagnostics and therapy, e.g. to diminish the likelihood of metastatic in cancer patients. Soluble forms of CD44 can act to prevent metastatic cells from "homing" to lymph nodes. (Updated on 25-MAR-2003 to correct PA

Its amino acid sequence was deduced from the nucleotide sequence (see AAV63462) of a cDNA clone ci solated from a colon carcinoma HT29 cell library using a novel method for cloning cDNAs from mammalian expression libraries. The method is based on transient expression of an antigen in eukaryotic cells and comprised on transient expression of an antigen in eukaryotic cells and compression of an antigen by adhesion to an antigen of eukaryotic cells expressing the antigen by adhesion to an compression compression to an extract the isolation and cloning of any protein which can be expressed and transported to the cell surface membrane of a eukaryotic cell, and was used to clone genes (see AAV63442-63) encoding cell surface antigens from mammalian lymphocytes (see camborate of a colonitied genes and proteins are useful for immunodiagnostic and immunocherapeutic applications, including the constitution of colonities and treatment of immune-mediated infections, diseases, and coloning of animals, including humans. The epithelial form of CD44 is a clycosylated protein of about 160 kDa. The ability to interfere with the binding of epithelial CD44 with extracellular matrices may be useful in therapy or diagnosis, e.g. to diminish the likelihood of metastasis in cancer patients. Soluble forms of CD44 can act to prevent metastatic for field from homing to lymph nodes. (Updated on 25-MAR-2003 to correct PR

```

cDNA encoding human CD40 antigen - useful for cloning cDNA encoding of surface antigens, constructing cDNA libraries, expressing vectors for expression in eukaryotic cells or their fragments.

1999-069813/06. DB; AAV81219.

Example 15; Col 79-82; 79pp; English.

This polypeptide comprises human CD44 antigen. Its amino acid sequence CC was deduced from the nucleotide sequence (see AAV81219) of a cDNA clone CC isolated from a colon carcinoma HT29 cell library using a novel method CC for cloning cDNAs from mammalian expression libraries. The method is Dased on translent expression of an antigen in eukaryctic cells and copysical selection of cells expressing the antigen by adhesion to an ICC antibody-coated substrate. It is useful for the isolation and cloning of any protein which can be expressed and transported to the cell surface CC membrane of a eukaryctic cell, and was used to clone genes (see AAV81199-CC CD7, CD13, CD14, CD16, CD19, CD20, CD27, CD28, CD31, CD34, CD37, CD37, CD38, CD37, CD38, CD37, CD37, CD38, CD37, CD37, CD37, CD38, CD37, CD37

useful for immunodiagnosis and immunotherapy of immune-mediated infections or disorders, e.g. asthma, immune-complex disease, particular infections or disorders, e.g. asthma, immune-complex disease, particular infections or disorders, e.g. asthma, immune-complex disease, particular immune-comple parasitic

Example 15; Col 75-78; 75pp; English

The present sequence is that of human epithelial CD44, a glycosylated CC membrane protein that may promote tumor invasiveness. The sequence was CC predicted from a cDNA clone (see AAA50598) isolated by screening a cDNA clone (see AAA50598) isolated by screening a cDNA CD ilbrary prepared from the the colon carcinoma line HT29 using the method CC if the invention. The method, designed to isolate cell surface antigen CC (cSA) nucleic acids, is based upon transient expression of a CSA in CC (cSA) protected cells and physical selection of cells expressing the antigen CC through the color of cells expressing the antigen CC cells and the proteins they encode, are useful for immunodiagnostic and cc culture dish. CSA nucleic acids isolated by the method of the invention, CC and the proteins they encode, are useful for immunodiagnostic and cc immunotherapeutic applications, diseases, and disorders in animals, including the manner. These disorders include asthma, immune-complex disease, amyloidosis, parasitic diseases or multiple sclerosis. The ability to interfere with the binding of epithelial CD44 with extracellular matrices can be useful in diagnostics and therapy. Interference of the binding can diminish the likelihood of metastasis in cancer patients. Soluble forms of CD44 can act to prevent metastatic cells from homing to lymph nodes

The present sequence encoding for human epithelial antigen CD44 is 1 of various human lymphocyte cell surface antigen polypeptide sequences (AAU02435-AAU02452) described in the present invention. The invention relates to a novel method of cloning cDNA encoding cell surface antigens and efficient construction of cDNA libraries. Also described are 2 expression vectors (AAS03171, AAS03174) which provide high level expression in eukaryotic host cells. A genetically engineered cDNA sequence encoding the CD28 amino acid extracellular domain sequence
                                                                                                                                                                                                                               Seed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Homo
                                                                                                                                       New recombinant DNA encoding CD28 useful for diagnosing immune-mediated diseases, infections or disorders, e.g. erythematosus, asthma, transplant rejection, rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; epithelial antigen; immune-mediated disease; CD44; infection; immune deficiency disorder; hypersensitivity; inflammation; systemic lugus erythematosus; platelet disorder; rheumatoid arthritis; transplant rejection; asthma.
                                                                                                                Example 15;
                                                                                                                                                                                                                                                                                                                                 01-DEC-1992;
                                                                                                                                                                                                                                                                                                                                                         17-APR-2001.

The purified genes and proteins are useful for immunodiagnostic and immunotherapeutic applications, such as in the diagnosis and treatment of immune-mediated diseases, infections or disorders in animals and humans. Such diseases include immune deficiency diseases, diseases of immediate type of hypersensitivity, asthma, hypersensitivity pneumonitis, systemic inflammation, platelet disorders, plasma and other cell neoplasms, parasitic diseases, multiple sclerosis, Guillain-Barre syndrome and tissue and organ transplant rejection. The sequences can also be used to identify, isolate and purify other antibodies and antigens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Seguence

The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. It is useful for treating cancer. The polypeptide is also polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptide and polymeutides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, myeloma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational specification but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                             0
```

The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MG-binding polypeptide. The polypeptides and polymuclectides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational

The invention describes a purified polypeptide, which comprises a configuration of a kinase, phosphatase, protease, protease inhibitor. The cytoskeletal protein, receptor or transcription factor. The colypeptide is useful as an immunogenic composition for eliciting in a manmal an immunogenic response directed against any of the purified polypeptide. The purified protypeptide, or the antibody that binds to this colypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed colypeptide is also useful for identifying compounds that binds to a naturally processed color class II MRC-binding polypeptide. The polypeptide and color cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, colon cancer, gastric cancer, adenocarcinoma for compact for cancer and colon cancer, gastric cancer, adenocarcinoma for compact for cancer, gastric cancer, adenocarcinoma for compact for cancer, gastric cancer, adenocarcinoma for compact for cancer, gastric cancer, adenocarcinoma for cancer, gastric cancer, adenocarcinoma for cancer, gastric cancer, adenocarcinoma, melanoma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, colon cancer, gastric cancer, adenocarcinoma for cancer, g

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                               The invention describes a purified polypeptide, which comprises a confirmance of a kinase, phosphatase, protease, protease inhibitor, cytoskeletal protein, receptor or transcription factor. The copyreptide is useful as an immunogenic composition for eliciting in a command an immunogenic response directed against any of the purified copyreptide. The purified polypeptide, or the antibody that binds to this colypeptide, is useful for treating cancer. The polypeptide is also composition for identifying compounds that binds to a naturally processed composition for identifying compounds that binds to a naturally processed colypucleotides are particularly useful for treating or preventing cancer. The polypeptides and colypucleotides are particularly useful for treating or preventing compounds of the unknament of the polypeptides are composed colon cancer, gastric cancer, adenocarcinoma, melanoma, colon cancer, gastric cancer, adenocarcinoma, melanoma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma or leukasmia. These are also useful for screening agents for creating the above mentioned diseases. This sequence represents an composition or leukasmia. These are also useful for screening agents for creating the above mentioned diseases. This sequence represents an composition of the polypeptide of translational composition of the polypeptide of the po

The CC transporter, cytoskeletal protein, receptor or transcription factor. The CC polypeptide is useful as an immunogenic composition for eliciting in a manual an immunogenic response directed against any of the purified color polypeptide. The purified polypeptide, or the antibody that binds to this color cancer if the polypeptide is also useful for identifying compounds that binds to a naturally processed color class I or class II MHC-binding polypeptide. The polypeptides and color cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, colom cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, color treating the above mentioned diseases. ```

New polypeptides (e.g. kinases, phosphatases, proteases, trancytoskeletal proteins, receptors or transcription factors), treating cancer, e.g. colon cancer, gastric cancer, sarcoma, , transporters, rs), useful for coma, lymphoma o ő

Example 2; SEQ ID NO 1279; 134pp; English

The invention describes a purified polypeptide, which comprises a cc fragment of a kinase, photsphatase, protease, protease inhibitor. Cc transporter, cytoskeletal protein, receptor or transcription factor. The cultivaries is useful as an immunogenic composition for eliciting in a cc mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this colypeptide is useful for treating cancer. The polypeptide is also cuseful for identifying compounds that binds to a naturally processed colypeptide or class I MHC-binding polypeptide. The polypeptides and cc class I or class I MHC-binding polypeptide. The polypeptides and cc class I or class I mHC-binding polypeptide. The polypeptides and cc polynucleotides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for c treating the above mentioned diseases. This sequence represents an completion but was obtained in electronic format directly from WIPO at the proposition but was obtained in electronic format directly from WIPO at fragments or natural characters. ftp.wipo.int/pub/published\_pct\_sequences binds to this

                                                                                                                                                                                                                                                                                                                                                                                                                                                        The epithelial form of human CD44 antigen (AAR91445) is weakly expressed by normal epithelium but highly expressed by carcinomas. Its amino acid sequence was deduced from a cDNA clone (AAR14725) isolated from colon carcinoma HT29 cells using a novel immunoselection cloning technique. CD44 was produced in transfected COS cells. A haematopoistic form (AAR91444) of CD44 was also identified. The ability to interfere with the binding of epithelial CD44 with extracellular matrices can be useful in diagnostics and therapy; interference of such binding can diminish the likelihood of metastasis in cancer patients. Soluble forms of CD44 can act to prevent metastatic cells from 'homing' to lymph nodes. (Updated or 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Seed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cloning of cDNA encoding cell surface antigen - useful for isolation diagnostic and therapeutic proteins.
